(a) Outcomes at threshold ($m=1$, $n=4$, $x=0.9$)
$k=1$ at $\phi^*=0.722$
$k=2$ at $\phi^*=0.195$
replications
reliability ρ of one replication
(b) Hub regions: random vs targeted shocks
theory, $k=1$
theory, $k=2$
random, $k=1$
random, $k=2$
targeted, $k=1$
targeted, $k=2$
reliability outside hit regions
supply-weighted share of clusters hit ϕ_s
(c) Shock tolerance by clusters
$m=1, n=4, k=2$
$m=2, n=6, k=3$
$m=1, n=6, k=3$
$m=3, n=4, k=2$
tolerable shock ϕ^*
supplier clusters c (1 = co-located)
