(a) Outcomes at threshold ($m = 1$, $n = 4$, $x = 0.9$)
$k = 1$ at $\phi^* = 0.722$
$k = 2$ at $\phi^* = 0.195$
replications
reliability ρ of one replication
(b) Hub regions: random vs targeted shocks
theory, $k = 1$
theory, $k = 2$
random, $k = 1$
random, $k = 2$
targeted, $k = 1$
targeted, $k = 2$
reliability outside hit regions
supply-weighted share of clusters hit ϕ_s
